Your career
at Finetech.

Our job offer

You're looking for an exciting task dealing with advanced technologies and modern, innovative engineering and you would like to make significant contributions to the development of special application solutions for our customers?

Look no further than here!

Finetech is a globally leading supplier of innovative equipment solutions for micro assembly and SMD rework applications. Since the foundation of the company in 1992, the portfolio has been expanded through own developments and acquisitions. Today, Finetech is able to offer a comprehensive range of products, including precise manual and semi-automated assembly systems, high-end fully automated die bonders as well as SMD rework systems for challenging applications.

The company supplies exclusively high-quality products offering unparalleled placement accuracy and application modularity, which are used for used for cutting edge technological developments in the market. Their range of applications extends from R&D and prototype construction to fully automated production environments.

Finetech works closely with customers from various industries, including aerospace, medical and biotechnology, consumer electronics, semiconductor industry, optoelectronics and defense, as well as universities and research institutions.

Company headquarters and production facilities are located in **Berlin**, with five additional sales & support centers in the USA and Asia.

To support our **team in Berlin**, we're looking for a

Group Leader – Software Developer for Machine and System Controls (Windows) (m/f/d)

Your responsibilities:

- You will lead a group of software developers, who are responsible for the maintenance and further development of established machine control applications on Windows operating systems
- In coordination with the head of software and hardware development, you will be responsible for staff management, the appropriate and efficient assignment of tasks, as well as the targeted training and further education of your group
- You will also develop your own unit and organize and optimize the processes
- In close cooperation with the product managers, you will design and program new software modules to extend the machine functionality
- Within the overall area of machine and system control, you will work on selected topics independently
- Architecture and design of future software will be your creation

Your profile:

- Degree in Computer Engineering, Electrical Engineering or Automation Engineering
- Experience in leading staff or motivation to take on a leading position because you have leadership skills
- Programming experience on Windows or Linux systems in larger projects for external customers
- Knowledge of the programming languages C++ (MS-VS), C, Pascal (Delphi); affinity to automation technology and its implementation in software (data management, sequence controls, image processing (Halcon), interfaces and protocols (EtherCAT, CAN)
- Your acumen and perceptiveness enable you to create functional analyses and develop solutions for complex overall systems
- Strong sense of responsibility combined with a high degree of initiative and decision-making ability,
- Teamwork and communication skills, determination, good ability to abstract,
- Very good English language skills and preferably good German language skills, or the willingness to expand your knowledge of the German language at the beginning of the employment in a language training course specially designed for you, in order to enable you to communicate fully as soon as possible
- Desirable additional knowledge: Microelectronics technologies; C#; programming of microcontrollers or real-time systems (e.g. ELMO Maestro)

We offer you an attractive working environment

- A diverse range of tasks in a successful, innovative and globally operating company.
- The opportunity to supervise your own project, to get personally involved and to develop yourself personally in an open working environment.
- An attractive payment with fixed salary and bonuses, reimbursement for child-care expenses, subsidized sporting activities, free drinks and fresh fruits.
- The modern working atmosphere of a newly built production and development center close to the EastGate shopping mall in Berlin-Marzahn.
